

COLLABORATION PROPOSAL

PRESENTED BY

Key Objectives

Attracting Liquidity

Vampire attack liquidity across multiple chains.

F-Asset Adoption

Widespread utilization across multiple EVM chains, resulting in greater fee capture and revenue for Flare.

Flare Chain Adoption

Recognition of Flare as a key piece of infrastructure within the DeFi landscape, acting as a backbone layer

StratEx Deliverables

Utilization

Build F-Asset use by deploying them on multiple EVM chains. The StratEx team will provide intros, BD support, and structure deals to ensure asset deployment.

Success criteria:

- Deploy F-assets across three or more additional EVM chains.
- Deploy multiple cross-chain strategies utilizing F assets.

Uplift

Boost the entire Flare ecosystem by utilizing multiple Flare projects. Such as Kinetic, Spark, and others, resulting in greater TVL growth, volume, and, ultimately, fee capture. If broad EVM adoption of F assets occurs, Flare will be positioned as a liquidity backbone for key assets and ensure healthy activity in its native lending markets.

Success criteria:

- Utilize three or more Flare native projects
- Increase chain TVL & volume

Strategies

Provide an additional DeFi utility for Flare chain by deploying StratEx. Then, work with the network of third-party strategists to maximize the strategies possible on Flare Network.

Success criteria:

- Deploy StratEx platform successfully
- Deploy 10 or more strategies exclusively within Flare Network

Increase Efficiency

For example, the utilization of hooks to capture out-of-range liquidity in LPs significantly increases overall efficiency on the chain.

Success criteria:

- Deploy strategies that boost asset utilization rates and result in higher efficiency and fee capture.

USDx Adoption

Encourage the adoption of USDx by including it in multiple strategies across multiple EVM chains.

Success criteria:

- USDx is available on three or more chains.
- Deploy cross-chain DeFi strategies featuring USDx to StratEx.

StratEx Asks

Investment / Grant

Option 1: \$600k investment split into three chunks of 200k each split across multiple rounds, builders, seed & private, at 40m, 50m, and 60m, respectively.

Option 2: \$600k investment into builders round at a 40m valuation (we will need to adjust the rounds to allow this), 4-month cliff, 24-month vest.

Option 3: \$300k Investment into builders round at a 40m valuation and \$300k grant payable upon agreed milestones based on deployment of FlrAssets across multiple chains.

Liquidity Seeding

Flare Seeds \$1,000,000 into multiple Flare ecosystem projects to ensure proper liquidity depth and availability of assets. F-assets listed in Kientic.

Kinetic - borrow rates kept favorable for a pre-determined period.

Participating in the **insurance fund** even if the only assets being insured by Flare treasury are the F-assets.

LP Mining Grant

One month **rFLR** up front to distribute between monthly gaps simply to reduce friction and ensure rewards are always available.

Co-Marketing

Flare ecosystem, including multiple dApps to support an extensive Co-Marketing campaign to support StratEx launch and encourage ecosystem-wide adoption.

Miscellaneous

Support Kinetic in proceeding with their additional security audit to satisfy fund requirements.

THANK YOU
